different possibilities enable
highest economic efficiency

Solistar

- The new short combination Solistar – as a substitute for the power harrow and the seed bed combination.
- The advantage of this machine is the very short and compact construction, which requires little lifting power by the tractor.
- A stable headstock ensures a safe mounting of the seeding machine.
- The tine section in 2 or 3 rows with changing tines or broad shares enables good crumbling and mixing of the soil structure.
- Variably a levelling bar can be mounted in the front or rear for consistently levelling.
- For light to medium-heavy soils the seeding speed and the acreage output can be considerably increased with this combination.
- The rollers can be chosen optionally and be adjusted to the seeding line of the seeding machine.

for the pro in agriculture

Solistar	rows	tines	tines dimension	working width cm	weight kg
303	3	24	31/12	300	450

Weight without roller.
